## DETAILED ACTION

### *Election/Restrictions*

1. Claims 7-12 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 11-14-05.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over McLeod in view of Goebel et al.

McLeod discloses a magnetic multilayer film deposition system comprising a plurality of treatment chambers, a conveyor for conveying a substrate on which is deposited in a state shielded from the atmosphere. The device treats the metal film including in said multilayer film (col 9, lines 1-53).

McLeod does not disclose an optical measuring device for optically evaluating the state of the metal film and controller for controlling the operation of the treatment device based on a measurement signal from the optical measuring device. Further, there is not shown to McLeod the measuring device as a reflection infrared spectrophotometer with windows as claimed in claim 2.

Goebel et al discloses optical measuring device for optically evaluating the state of the metal film and controlling the operation of the treatment device based on a measurement signal from the optical measuring device using an reflected optical technique (fig 1 and fig 3).

It would have been obvious to one with ordinary skill in the art to include optical measuring device for optically evaluating the state of the metal film and controlling the operation of the treatment device based on a measurement signal from the optical measuring device using an incident window and light window because Goebel et al teaches importance of measuring and controlling deposition (para 0001-0002; 0023-0025).
